1. SAFETY INSTRUCTIONS

**Warning:** Important safety instructions for people. READ CAREFULLY when you see this symbol: 
This product must only be used for its intended purpose. Any other use is dangerous. Follow all instructions as improper installation may result in serious bodily injury.

Keep these warnings together with the installation and operation manuals that come with the gearmotor.

- Always cut off the power supply before performing any type of intervention.
- Always make sure the gearmotor is properly connected to the earth.

Use and installation of the product must comply with Machinery Directive 2006/42/CE. Verify that the system is EN 124445 and EN 12453 standard compliant.

Installation must be carried out by expert qualified personnel who knows the potential hazards associated and in full compliance with current regulations. Use of the product must be restricted to its intended use. Any other use is to be considered dangerous and therefore forbidden.

Do not allow children to play with the fixed command devices, or in the gate’s area of operation. Keep any remote control devices (i.e. transmitters) away from children. to prevent the gearmotor from being accidentally activated.

Keep the gate and the gate opener regularly maintained. Use only Proteco’s original spares. Users are strictly forbidden to carry out any changes on the gate operator. Proteco Cancelli Automatici Srl is not liable for any damage resulting from improper, wrongful or unreasonable use.

---

**CE COMPLIANCE DECLARATION**

Manufacturer: PROTECO S.r.l.
Address: Via Neive, 77 – 12050 Castagnito (CN) – ITALIA

declares that

- The product type: LEADER electromechanical gear motor for swing gates
- Models: LEADER 3 TI, LEADER 4 TI, LEADER 5 TI, LEADER 24 3 TI, LEADER 24 4 TI, LEADER 24 5 TI, LEADER 3 TA, LEADER 24 4 TA

Is built to be integrated into a machine or to be assembled with other machinery to create a machine under provisions of 2006/42/EC Machinery Directive, with reference in particular to the following requirements: 1.1.2  1.1.3  1.1.5  1.2.1  1.2.2  1.2.3  1.2.6  1.3.2  1.3.4  1.3.9  1.4.1  1.4.2.1  1.5.1  1.5.4  1.5.6  1.5.8  1.5.13  1.6.1  1.6.4  1.7.1  1.7.3  1.7.4

It complies with the essential requirements of EEC Directives:
- 2004/108/CE (electromagnetic compatibility)
- 1999/5/CE  (R&TTE)
- 2011/65/CE (directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment)

It complies with the essential requirements of EEC Directives:
- EN 12453 Industrial, commercial and garage doors and gates. Safety in use of power operated doors. Requirements
- EN12445 Industrial, commercial and garage doors and gates. Safety in use of power operated doors. Test methods.
- EN 60335-1 Safety of household and similar electrical appliances - Part 1: General requirements
- EN 60335-2-103 Household and similar electrical appliances - Part 2-103: Particular requirements for drives for gates, doors and windows.

The manufacturer also declares that the start-up of the machinery is not permitted unless the machine, in which the product is incorporated or of which is becoming a component, has been identified and declared as conforming to 2006/42/EC Machinery Directive.

Castagnito, 3rd October 2016

Marco Gallo  
CEO

---

2. DESCRIPTION AND INTENDED USE

The LEADER operator range is designed to automate swing gates for residential use. The use of this product for purposes other than those described above and installation executed in a manner other than as instructed in this technical manual are prohibited. All LEADER systems are irreversible, therefore no electric-lock is needed. In case of power cut the gate operator can be easily released by manual operation. The 24V LEADER systems can be connected to a back-up battery to grant a full operation cycle in case of power cut.

9. Release key
3. INSTALLATION

3.1 Preliminary checks

Before installing make sure:

- The gate conditions are suitable to automate.
- Weight, dimensions and gate construction are proper for the operator you intend to buy.
- You have suitable mechanical ground stops.
- The automated parts are in good mechanical conditions.
- The opening of the automated gate is not an entrapment hazard as regards any surrounding fixed parts and there is sufficient space for manual release.
- Any lawn watering devices will not wet the gearmotor from the bottom up.
- The earth cable is properly connected.
- Do not install onto gates on either an upward or downward slope (i.e. that are not on flat, level ground).

3.2 Wiring

3.2.1 Standard installation

3.2.2 CABLE TYPES AND MINIMUM THICKNESSES

The quantities of tubes and cables needed (not included in the kit) depend on the type and number of accessories connected to the gate area.
3.3 ESTABLISHING RH AND LH OPERATOR

A RH motor and a LH motor are supplied with the kit. Ensure you are mounting the correct handed motor to the leaf (see picture 3, inner view).

Make sure there are mechanical ground stops in opening and closing (see picture B).

**LEADER TI**
Gate in closing position - inox pipe maximum extension:
- Leader 3 = 345 mm
- Leader 4 = 445 mm
- Leader 5 = 545 mm

Gate in opening position - inox pipe minimum extension 50 mm (see picture 4).

**LEADER TA**
Gate in closing position: minimum distance 50 mm.
Gate in opening position: maximum distance 450 mm. (see picture 5).

3.4 FASTENING THE GEARMOTOR

3.4.1 Vertical positioning quota

a) If the gate is sturdy you can fit the gearmotor wherever it goes, at any height from ground.

b) If the gate is particularly light fit the gearmotor as close as possible to gate centerline.

3.4.2 Horizontal positioning quota

Gate leaf hinged in the center of the pillar (see picture 6). Gate leaf hinged on the corner of the pillar (see picture 7). Best of performance is obtained respecting A and B dimensions, see picture 8 (opening angle 90°).
If the ideal scenario of A and B is not applicable, refer to the below table to determine the brackets position (values are expressed in mm).

3.4.3 OUTWARD OPENING

Your gate can be automated for opening outwards too. In this case the value of A dimension shall be calculated towards the gate center. See picture 9 and 10 and fit the bracket accordingly.

3.5 FASTENING REAR BRACKET T1

Weld or bolt the rear bracket T1 on the post, applying the A and B quota calculated according to the gate hinge position and the motor rotation point. Chemical bolts can be used and must comply with the post features (brick, wood, steel, etc.). When fixing keep a minimum distance of 30/35 mm from the post edge in order to avoid damages (see picture 11).

- Rear brackets T1 are provided LH and RH, to match to the according LH and RH motor (see picture 12).
- When fixing the operator to the rear bracket T1, plug PR1 rotation pin downward oriented (see picture 13).

3.6 FASTENING FRONT BRACKET S3

3.6.1 LEADER T1
To determine the position of bracket S3:
- Put the gate in closing position.
- Release the gearmotor.
- Extend the inox pipe arm fully.
- Turn back the arm 2 cms. This avoids the motor to “leap forward” (see picture 14).
- Affix the bracket S3 to the motor slot. Plug the rotation pin PR1 into the locating hole.
- Fit the bracket S3 on the gate.
- Keep the motor horizontal, fix or weld.

Check the manual opening of the leaf before definitively fixing the bracket to make sure the gate can open fully to your required angle.
3.6.2 LEADER TA

To determine the position of bracket S4:
- Put the gate in closing position
- Release the gearmotor
- Slide the front drive pin to the closing limit-switch point (keep a distance of 45 mm between the pin and the pipe end terminal (see picture 15).
- Fix the bracket S4 to the drive pin. See picture 16.
- Fit the bracket S4 onto the gate and keep the motor horizontal. Fix or weld.

⚠️ Check the manual opening of the leaf before definitively fixing the bracket to make sure the gate can open fully to your required angle.

4. RELEASING THE GEARMOTOR

LH OPERATOR
- Insert the key and turn 90° clockwise (picture 17).
- Pull the release handle outwards to unlock the motor.
- Turn the key 90° clockwise to keep the handle locked.
- Now you can proceed to manual operation.
- To return to automatic operation invert the procedure.

RH OPERATOR
- Insert the key and turn 90° counterclockwise (picture 17).
- Pull the release handle outwards to unlock the motor.
- Turn the key 90° counterclockwise to keep the handle locked.
- Now you can proceed to manual operation.
- To return to automatic operation invert the procedure.

⚠️ The gate can be locked in any position after the first start command the system will return to its default settings.

5. MAINTENANCE

Functional checks must be performed once every 6 months, including: checking the state of lubrication and tightness of the anchoring screws on the operator as well as the good operation of all safety devices.

6. DISMANTLING AND DISPOSAL

⚠️ DO NOT DISPOSE OF IN NATURE!

Some components may contain hazardous waste. They must, thus, be removed and turned into licensed firms for their disposal. Before acting always check the local laws on the matter.
